(54) PRODUCTION INFORMATION SYSTEM AND PRODUCTION CONTROLLING METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To easily recognize progress of a production process by collectively performing production controls of producers of a plurality of enterprises.

SOLUTION: Production information on producers A, B and C sides is inputted by a client 3. The inputted production information is registered in an individual DB31 provided for the client 3. The production information stored in the individual DB31 is transmitted to a server 1 so as to be registered in an integrated DB11 via a communication line 2. The server 1 registers the production information transmitted from the client 3 in the integrated DB11. The server 1 transmits the production information stored in the integrated DB11 to a client 4 in compliance with the client 4 on ordering persons P, Q and R sides connected with the server 1 via the communication line 2. The client 4 outputs the production information acquired from the server 1 by an output means 41.

LEGAL STATUS

[Date of request for examination]

18.10.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
